**CS srl** plans and provides integrated and turnkey solutions to promote the development of modern networks of telecommunications, for the wireless and wireline access and transmission, advanced solutions for information safety and plants of complex videosurveillance, also possible making use of wireless technology.

“Our mission” has two aims: it aspires to realize quickly effective networks of telecommunications to reduce the digital divide that limits cultural growth and economic activities, to plan vanguard systems of safety for the environment and for the citizen. The most important requirement for us is that only an up-to-date and efficient technology united with semplicity permits a real technological innovation.

**CS srl** has selected a set of very good quality products which permit to face and to solve the most important problems of transmission and safety of data in a more advanced and effective way.

Knowledge of radio links, both with free and certificated frequencies, the capability of managing link laser and optical fibres can be combined with trainings provided with

broadcast TV cameras, to obtain extraordinary results for the monitoring of wide industrial and military areas.

Enclosed with the present datasheet some images and descriptions of a series of technologies we use in our work.

Best regards  
Pierfranco Manzi
